

```
#include <iostream>
```

```
int main() {
```

```
    double resistance;
```

```
    std::cout << "Enter initial earth loop impedance/resistance value (Ohms): ";
```

```
    std::cin >> resistance;
```

```
    while (resistance <= 5.0) {
```

```
        std::cout << "Reading normal (<= 5 Ohms). Enter next validation reading (Ohms): ";
```

```
        std::cin >> resistance;
```

```
    }
```

```
    std::cout << "Alert: Earth resistance too high. Improve earthing system." << std::endl;
```

```
    return 0;
```

```
}
```
